

Guang Jie Geotech Playbook

PROJECT Paid work for an independent geotechnical engineer, 2026–27			
PREPARED FOR Tuang Guang Jie	PREPARED BY Laminar Flow	DATE 14 Sep 2026	REVISION 1 · for discussion

Where the soil work is this year, what each job pays, the nine things his skills sell as, the directions worth exploring, and a 30-day outreach plan with the radar, target list and drafts already built.

■ 1. Summary

His freelance market has narrowed to offshore energy, and offshore wind, the busiest part of it since 2021, is in a documented slump until at least 2027. His skills are wider than that market. In 2026 the busiest buyers of soil-investigation, foundation-analysis, instrumentation and laboratory skills in his region are onshore and nearshore construction in Singapore and Johor, Malaysian carbon-capture and decommissioning programmes, Australian decommissioning and infrastructure, and the dispute and review market.

The plan has three layers:

1. **Income in weeks.** Expert-network calls, agency-placed rotations (offshore and onshore), and trigger-based direct outreach to companies that have just won work.
2. **Volume in months.** Singapore and Johor construction, where he presents as a site-investigation, instrumentation and lab engineer rather than an offshore specialist.
3. **Structure in a year.** Professional Engineer registration in Singapore, an expert-witness listing, and two or three niches (floating-solar anchoring, decommissioning positioning) where his rig-move history is rare.

Laminar Flow's part is to make his outreach specific and timely: a daily radar of contract awards and campaign starts, a named target list, three CV framings, a capability statement with fixed prices, and drafted messages that reference the trigger. He does the calls and the engineering. Product ideas wait until he is billing again.

■ 2. What his freelancing is, and what a job pays

Clients hire him by the day or by the job to find out what the ground will do under a structure. Four kinds of work:

- **Site-investigation supervision.** On a drilling vessel or rig as the client's representative, checking that the contractor drills, samples and tests correctly, and signing off the data. Most of his income since 2018.
- **Analysis.** Whether a jack-up rig's legs will sink safely (leg penetration to ISO 19905-1), how deep piles must go and whether they can be driven, pile ageing, mudmat stability for subsea structures, conductor setting depth.
- **Reporting and review.** Factual and interpretive reports; third-party QC of other engineers' work.
- **Project management and tendering.** Pricing and running soil-investigation contracts (FOSTA), and a PUB sewer-rehabilitation contract (Smitech).

2.1 Planning ranges per job

Sourced figures are marked; the rest are working estimates to be checked against his own past invoices in week 1.

OFFER	UNIT	RANGE	BASIS
Offshore client rep / QC, APAC	Day	USD 600–1,000; North Sea USD 800–1,400	Published offshore survey day-rate spread USD 150–1,400 and EUR 250–800+; senior client reps sit at the top (sourced)
One offshore campaign	4–8 week rotation	USD 17,000–56,000 gross	Day rate × days on board; a 28/28 rotation leaves half the year unpaid
Onshore Singapore SI / instrumentation engineer	Day or month	S\$450–700 per day; S\$7,000–9,000 per month	Senior geotechnical salaries ~S\$89k per year plus the 10–20 % 2026 premium for hard-to-fill roles (sourced), converted to contract

OFFER	UNIT	RANGE	BASIS
Jack-up leg-penetration assessment	Per location	USD 3,000–8,000 as an independent	Consultancies quote case by case; no public price list (estimate)
Pile capacity / driveability / mudmat package	Per structure	USD 4,000–15,000	Estimate
Report writing or third-party review	Per report	USD 1,500–6,000	Estimate
Lab data QC / lab witness / ISO 17025 readiness	Day or fixed	S\$500–800 per day; S\$8,000–20,000 per readiness package	Estimate
Instrumentation interpretation retainer	Month	S\$3,000–8,000 part-time on one job	Estimate
Expert-network call	Hour	USD 200–500	Published network rate guidance (sourced)
Expert witness	Day	S\$2,500–5,000 once established	Singapore convention for senior engineering experts (estimate)

Rule of thumb: one offshore rotation a quarter plus two fixed-price analysis packages a month replaces a full-time senior salary, and the fixed-price part does not depend on a vessel sailing.

■ 3. Where the work is in 2026

MARKET	WHAT IS HAPPENING	ROLES HE FITS
Singapore onshore	Construction demand S\$32–38 bn; Changi T5 substructure and tunnels (to 2029); Cross Island Line Phase 2 (six underground stations, to 2032); Tuas Port; HDB programme. ~15 % engineer shortfall; hard-to-fill roles paying 10–20 % over 2024	SI supervising engineer, instrumentation and monitoring, ground-improvement QC, lab data review, tender support, resident engineer's geotechnical assistant
Singapore nearshore	Long Island 800 ha preparatory works from end-2026; Pulau Tekong 800 ha polder; Northern Tuas Basin reclamation instrumentation; East Coast protection	Nearshore SI, settlement monitoring, reclamation QC
Johor / Malaysia onshore	JS-SEZ; Johor is APAC's largest data-centre market (5 GW+ pipeline; ~2.4 GW under construction in SE Asia in H1 2026); RTS Link opens Dec 2026	Campus SI, piling supervision, load-test interpretation
Malaysia offshore	HELMS Geomarine's 3+2-year PETRONAS CCS SI frame (jack-up assessments, driveability, reporting); PETRONAS Carigali tendering removal of up to 31 platforms; ~9 jack-ups needed in 2026; PETRONAS 2026 bid round	Remote jack-up and driveability packages, decommissioning positioning, third-party review
Floating solar	Kenyir 595 MW (construction from Jun 2026), Masdar's Chereh 200 MW, LSS6 2 GW with a larger floating share; Cirata needed ~2,500 anchors in very soft soil at up to 90 m	Lakebed SI, anchor design in soft soils
Australia	Bass Strait decommissioning (Allseas, 12 topsides and 11 jackets, lifts from 2027); Northern Endeavour Phase 3a tender (Aug 2026); geotechnical engineer on the skills-shortage list, 68 % vacancy fill rate	Vessel-positioning assessments, remote analysis contracts, sponsorship route

MARKET	WHAT IS HAPPENING	ROLES HE FITS
Oil and gas offshore	Aramco restarting eight suspended jack-ups; Chevron's North Malay campaign on NAGA 8 from Aug 2026; India's ONGC unpredictable after four cancelled jack-up tenders	Rig-move SSA, client rep
Offshore wind survivors	Fugro's FengMiao II SI for CIP (Taiwan) through Q3 2026; Ørsted Incheon surveys done; Korea awarded 1.786 GW in H1 2026; Japan Round 3 winners at Aomori South and Yuza	Client rep, QC, design-phase review
Subsea cables	Singapore landings 2026–28 to SE Asia, US/Guam, Middle East and Australia	Route-survey client rep, burial-assessment review
Middle East	NEOM cancelled USD 6.85 bn of contracts in March 2026 but the regional geotechnical market is still growing; primes advertise roles	Agency-placed only

Why the slump is not about him: Fugro's offshore-wind backlog is down 47 % year-on-year and it is laying up 5–7 vessels; Taiwan's Round 3.1 shrank from 8.7 GW awarded to about 2.3 GW proceeding; Japan cancelled 1.7 GW and postponed Round 4. Freelance day rates are the first thing cut and the first restored.

■ 4. Nine things his skills sell as

#	OFFER	BUYER	FORMAT
1	Client representative / QC on SI campaigns (offshore, nearshore, onshore)	Developers, owner's engineers, SI contractors	Day rate, rotation
2	Jack-up leg-penetration and SSA packages	Rig movers, marine warranty surveyors, drilling and decommissioning contractors	Fixed price, remote
3	Pile capacity, driveability, ageing, mudmat, conductor setting depth	EPCs, SI contractors without in-house engineers	Fixed price, remote
4	Laboratory data review and QC, lab witness, ISO/IEC 17025 readiness	SI contractors, labs seeking SAC-SINGLAS scope, developers	Fixed price or day rate

#	OFFER	BUYER	FORMAT
5	Instrumentation and settlement-monitoring interpretation	Reclamation and ground-improvement contractors, PUB/HDB consultants	Day rate or retainer
6	Factual and interpretive report writing, third-party review	Small consultancies and contractors with backlog	Per report
7	Tender support for SI contractors	Contractors bidding GeBIZ and private work	Per tender
8	Expert-network calls and briefings	GLG, AlphaSights, Guidepoint, Dialectica, Coleman, Third Bridge	Hourly
9	Project or operations management for SI or civil contractors	Contractors short of PMs	Contract or permanent

Offers 2–7 need no vessel and no mobilisation.

■ 5. Directions to explore beyond 60 days

- 1. Professional Engineer (Civil) registration in Singapore, then Specialist PE (Geotechnical).** PEB's April 2026 guidelines list SI and testing, pile load testing and interpretation, and instrumentation and monitoring as the core competencies, which he has. It converts him from engineer to signatory, roughly S\$600 to S\$1,500 a day. Low cost; 12–24 months.
- 2. Expert witness and forensic geotechnics.** SIAC, SICC and SOP-Act adjudications in Singapore; AIAC in Malaysia (new 2026 rules); insurers' loss adjusters on settlement, slope and foundation claims. Entry: directory listings, two short forensic case notes, an expert-witness course.
- 3. Floating-solar anchoring for SEA.** Malaysia's LSS6, Kenyir and Chereh, and Indonesia's reservoir programmes need lakebed SI and anchor design in soft soils. Offshore mudmat and anchor thinking applied to reservoirs; few in the region have both.
- 4. Decommissioning positioning.** Malaysia's 31 platforms and Bass Strait need jack-up and heavy-lift assessments next to old, sometimes scoured foundations.
- 5. Data-centre foundations in Johor.** A standing relationship with two or three piling contractors and one owner's engineer.
- 6. Australia.** Engineers Australia (CPEng or NER) registration, remote contracts first, sponsorship later.

7. **Training and lecturing.** BCA Academy, polytechnics, NTU part-time modules.
Low pay, high credibility.
8. **Lab accreditation consulting.** Regional SI contractors need ISO/IEC 17025 scope to bid public work.
9. **Own analysis products** once he is billing: a productized leg-penetration assessment and report automation (Appendix C).

■ 6. The 30-day plan

WEEK	HIM	LAMINAR FLOW	TARGET
1	Register with agencies and expert networks; approve the three CVs and the LinkedIn rewrite; confirm he will send 15 messages a week	Deliver CVs, capability statement, target list v1; radar running daily	12 registrations, 3 expert-network profiles live
2	15 trigger-based messages (5 offshore, 10 onshore/Johor); 3 recruiter calls	Draft messages from radar hits; add e-mail alert sources	15 sent, 4 replies
3	15 more; day-7 follow-ups; PEB eligibility check	LLM extraction of company/project/scope from hits; tracker	1 expert call, 2 interviews
4	Same; price the first fixed-price job	Pipeline review; drop segments with no replies, double those with replies	1 paid engagement

Registrations (two days): Atlas Professionals, NES Fircroft, Airswift, Brunel, SA World, Spencer Ogden, EPI Group, Precise Consultants; Corestaff, PERSOLKELLY, Randstad, Hays, Michael Page; GLG, AlphaSights, Guidepoint, Dialectica, Coleman, Third Bridge; Expert Services International; a PEB portal account; GeBIZ, AusTender and LinkedIn keyword alerts.

■ 7. What Laminar Flow has built

- **Opportunity radar** (`opportunity_radar.py`). Reads seventeen feeds across offshore energy, ground engineering, tunnelling, civil engineering, solar, rigs, maritime and Singapore and Asia business news. Reports only items with geotechnical content, then weights demand triggers (awards, campaigns, rig moves,

decommissioning, CCS, cables, reclamation, data centres, floating solar, MRT and airport works, disputes), geography he can reach, and named buyers including Singapore agencies and the large marine and civil contractors. Scores titles and summaries only, to avoid sidebar noise. Standard library, cron-able. The first two weeks are calibration; sources without feeds (GeBIZ, AusTender, PETRONAS, LinkedIn) go through e-mail alerts parsed from the mailbox.

- **Target list** (`target_list.csv` , 104 rows). Segment, company, base, why now, role to contact, channel, and which of the nine offers fits. Priority 1 rows appear in Appendix B.
- **Outreach kit** (`outreach_kit.md`). Three CV framings, capability statement, LinkedIn rewrite, six message templates, registration links. Reproduced in Appendix A.

Next: e-mail-alert parsing, an LLM pass that extracts {company, project, location, scope, phase} from each hit and drafts the message, and a simple tracker.

■ 8. Constraints

- **Onshore Singapore work wants a PE or a PE-supervised role.** Without PE he is hired as engineer, not signatory; fine for cash flow and the argument for §5.1.
- **Local content** in Malaysia and Indonesia favours nationals. His Malaysia play is remote analysis packages and Johor site work reachable from Singapore.
- **Rate reset.** Onshore day rates are lower than offshore; the fixed-price menu and the PE route are how he climbs back.
- **Competition** from engineers Fugro is releasing. Specificity and speed of outreach are the edge.
- **Liability and confidentiality.** Signed reports are his; he should confirm professional-indemnity cover before the first fixed-price job. Past reports belong to clients and are used only anonymised or with permission.
- **He must send the messages.** Confirm in week 1.

■ Appendix A. Outreach kit

Drafts for him to edit. Everything below is built from his LinkedIn profile; he should correct any project detail before it goes out.

A.1. Three CV framings

Same facts, three orderings. Each opens with the two lines a recruiter's Boolean search and a hiring manager's first glance both need.

A. OFFSHORE CLIENT REPRESENTATIVE / QC (FOR ATLAS, NES, AIRSWIFT, SA WORLD, EPI, DEVELOPERS)

Headline: Offshore Geotechnical Client Representative and QC Engineer, 20 years, Singapore-based, available on 14 days' notice.

- Client representative, QC, site manager and lead engineer on offshore, nearshore and onshore soil investigations since 2012; independent since 2018.
- Rig moves, offshore drilling and sampling, downhole CPTu, laboratory programmes, factual and interpretive reporting; third-party engineering QC.
- Fugro Singapore 2008–2011: Woodside Browse LNG (data processing), PEMEX Bay of Campeche drilling and sampling, Irish Sea windfarm downhole investigations, campaigns in Australia, Indonesia, Thailand, Vietnam, China, India.
- Standards and tools: ISO 19905-1, API RP 2GEO / ISO 19901-4, AGS, gINT, JURIG3, APICAP, UnipLOT, Geodin, GRLWEAP-type driveability.
- Leadership: nine years as Platoon Sergeant and Company Sergeant Major, SAF Commandos; accountable for 30 men's safety and conduct.
- BEng, Nanyang Technological University. BOSIET (renew if lapsed).

B. ENGINEERING ANALYSIS (FOR MARINE WARRANTY FIRMS, RIG MOVERS, EPCS, SI CONTRACTORS WITHOUT IN-HOUSE ENGINEERS)

Headline: Offshore Foundation Analyst: jack-up leg penetration, pile capacity and driveability, mudmat stability. Fixed-price packages, 48-hour turnaround.

- Leg-penetration and site-specific assessment inputs to ISO 19905-1; punch-through, squeezing and backflow checks; extraction.
- Pile capacity (API/ISO), driveability, pile ageing (set-up), conductor setting depth, mudmat and shallow-foundation stability for subsea structures.
- Soil parameter derivation from CPT, borehole and laboratory data; factual and interpretive reports; third-party review.
- Senior Geotechnical Engineer / Project Manager, FOSTA 2016–2018: SI tenders, budgets, parameter recommendation, foundation-type analyses.
- 14 years of analyses on live rig moves and installation campaigns across SE Asia, Australia and the Gulf of Mexico.

C. ONSHORE SI, INSTRUMENTATION AND LABORATORY (FOR SINGAPORE AND JOHOR CONTRACTORS, CONSULTANTS AND LABS)

Headline: Geotechnical Engineer for site investigation supervision, instrumentation interpretation and laboratory data QC. Singapore-based, immediate.

- 20 years of soil investigation: drilling and sampling supervision, in-situ testing, laboratory programmes, data processing and reporting.
- Project Manager, Smitech Engineering 2011–2012: PUB Phase 4 sewer rehabilitation (42 km, 1,000 manholes), planning, cost, risk and client liaison.
- Senior Geotechnical Engineer / PM, FOSTA 2016–2018: SI tendering and project delivery in Singapore.
- Fugro laboratory and data-processing background; familiar with ASTM/BS test methods, AGS data, gINT; able to support ISO/IEC 17025 readiness.
- Instrumentation and settlement monitoring interpretation for reclamation and deep excavation (state actual projects).
- SAF Commandos NCO leadership; safety-first site culture.

A.2. One-page capability statement (text)

Tuang Guang Jie, Geotechnical Engineer (independent) Singapore | 20 years | offshore, nearshore, onshore | mobilise in 14 days

Site work: client representative, QC, site manager, lead engineer on soil investigations; rig moves; drilling and sampling supervision; in-situ testing; laboratory programmes.

Analysis (remote, fixed price): - Jack-up leg-penetration assessment per location - Pile capacity, driveability and ageing per structure - Mudmat / shallow foundation stability - Conductor setting depth - Third-party review of factual and interpretive reports

Onshore: SI supervision, instrumentation and settlement interpretation, laboratory data QC and lab witness, tender support for SI contractors.

Track record: Fugro Singapore (Woodside Browse, PEMEX Bay of Campeche, Irish Sea windfarms); Smitech (PUB sewer rehabilitation PM); FOSTA (senior engineer / PM); independent since 2012 across SE Asia, Australia, India, Gulf of Mexico.

Standards: ISO 19905-1, API RP 2GEO, ISO 19901-4, AGS, ASTM/BS lab methods. **Tools:** gINT, JURIG3, APICAP, Uniplot, Geodin.

Contact: [phone] | [e-mail] | LinkedIn

A.3. LinkedIn rewrite

Headline: Offshore & Onshore Geotechnical Engineer | Client Rep / QC | Jack-up SSA, Pile Capacity & Driveability | Site Investigation & Instrumentation | Singapore, available 14 days

About (first 3 lines are what shows): Independent geotechnical engineer, 20 years across offshore oil and gas, offshore wind, CCS and onshore infrastructure soil investigations. Available now for client rep / QC rotations, remote fixed-price analysis packages (jack-up leg penetration, pile capacity and driveability, mudmat), and onshore SI, instrumentation and lab QC roles in Singapore and Johor.

Then the existing paragraphs, tightened.

Skills to add: CPT interpretation, AGS data, ISO 19905-1, API RP 2GEO, pile driveability, GRLWEAP, gINT, geotechnical instrumentation, ground improvement QC, ISO/IEC 17025, expert witness (after first case).

Settings: Open to work (recruiters only or public), job titles: Geotechnical Engineer, Client Representative, Resident Engineer, Geotechnical Project Manager; locations: Singapore, Malaysia, Remote.

A.4. Messages

Trigger-based, contractor (offshore)

Congratulations on [contract]. The scope ([CPTu / jack-up assessments / driveability / reporting]) is what I have delivered as lead engineer and client rep across SE Asia since 2012, including [nearest relevant project]. Singapore-based, 14 days to mobilise, and I take remote analysis packages at a fixed price during campaign peaks. One-page capability statement attached.

Trigger-based, onshore SI or reclamation contractor

I saw you were awarded [project]. I am a Singapore-based geotechnical engineer with 20 years in soil investigation, lab data and reporting (Fugro-trained), 7 years as client rep and QC, and PUB project-management experience. Available immediately for supervising engineer, instrumentation interpretation or report writing, day rate or fixed price per report.

Marine warranty / rig-move consultancy

When your leg-penetration workload spikes, I take overflow: ISO 19905-1 spudcan penetration, punch-through and extraction assessments, fixed price

per location, 48-hour turnaround, delivered in your template for your review and stamp. 14 years of live rig-move assessments in SE Asia.

Lab / SI contractor, accreditation

If you are preparing or extending SAC-SINGLAS (ISO/IEC 17025) scope for soil testing, I can review methods, records and uncertainty budgets and run a mock assessment before the assessor visits. Fugro laboratory background; fixed-price package.

Warm reconnect (Fugro alumni)

Long time. I am independent and open for work while the wind market is quiet: client rep rotations, or remote leg-penetration and driveability packages if your team is stretched. If Fugro is routing overflow to freelancers this year, I would like to be on that list.

Expert-network onboarding blurb

Independent geotechnical engineer, 20 years across oil and gas, offshore wind, CCS and onshore infrastructure SI in APAC; can speak to survey-vessel supply and demand, SI contractor landscape, jack-up assessment practice, lab capacity and accreditation, and the effect of the 2025–26 offshore-wind slowdown on APAC contractors.

A.5. Registrations (two days)

■ Appendix C. Later: product options (deferred until he is billing)

Ranked in `collaboration_assessment.md`:

- **A. Productized leg-penetration assessment.** SI data in, ISO 19905-1 penetration prediction and draft report out in under an hour, with his review and signature. Demand is steady (jack-up utilisation ~90 %); existing tools (Cathie's JACA, DNV, Ryder, CASK Spudpen) are sold as consultancy or enterprise licences, not to independents. Six-week probe, gated on two pre-sold jobs.
- **B. Factual-report and CPT-interpretation automation** for small SI contractors, downstream of the Singapore reclamation programme.
- **C. Physics-informed ML** on pile driveability and set-up, as a co-authored white paper built on A/B data, timed for the 2027 recovery.
- **D. He becomes Laminar Flow's geotechnical and marine domain lead** for bids; revenue share per engagement.

Terms to settle before anything ships: liability, client confidentiality, purchased standards, a written revenue and IP split, and who sells.
